

Keep your Cool and Keep your Breakers from Blowing

JTB News: Most RV's have either a 30 Amp or a 50 Amp electrical system with a single 30 Amp or 50 Amp power cord. However if you add up all the amps of the appliances in your RV it is usually much more than 30 Amp or 50 Amp service. With that said, it is important for every RVer to know what appliances pull what Amps. Below is a chart of typical appliances and approximately how many Amps each will require to operate.

* Air Conditioner (Each) -----15-17 Amps	* Electric Water Heater ----- 5.7 Amps
* Electric Coffee Maker ----- 9 Amps	* Refrigerator ----- 5.7 Amps
* Toaster ----- 10 Amps	* Microwave ----- 12 Amps
* Hair Dryer ----- 12 Amps	* Iron or Electric Skillet ----- 10 Amps
* TV or Laptop Computer ----- 2 Amps	* Dirt Devil Hand Vac ----- 2 Amps
* Crock Pot ----- 2 Amps	* Food Processor ----- 6 Amps

In the case with most RVers the morning is when they will use the most Amps. They are heating water, cooking breakfast, and the wife is blow drying her hair. And if you are in the Hotter area of the US you have both Air Conditioners going. When this is going on most RVers are pulling more Amps than the Main Service will handle. In some cases most RV's have manual switches in place to run one or another appliance to reduce the load but still have the appliance available by using one at time. Many have said that there is not a solution for this system, that if you use both the 30 Amp and the 20 Amp plugs you do not get 50 Amps of supply. And typically with most products out there you do not get the extra 20 Amps without causing damage to something within the system.

With the demand of obtaining more Amps without damaging any system components, JTB Manufacturing, Inc. has developed the JTB Power Solution that will successfully ADD 20 More AMPS of power to your RV and enable you to run that 2nd Air Conditioner or other Appliances of your desire by utilizing the 20 Amp GFCI Circuit at most State RV Parks. If the 20 Amp GFCI is available you just plug in your JTB Power Solution and enjoy the extra 20 Amps of power in your RV. The JTB Power Solution will give you 20 More Amps of Power and enable you to manage one 20 Amp circuit out of your main panel.

The JTB Power Solution can be purchased at most RV Dealers.
